Examining the Evidence: How School Buildings Influence Student Health, Thinking and Performance

This 1-hour training on indoor air quality (IAQ) in schools—

- Explained how building health and IAQ are foundational to student health, thinking and academic performance.
- Highlighted more than 30 years of scientific evidence gathered on the environmental factors that affect student health and performance.
- Described the importance of establishing an IAQ management plan and motivating leadership and fellow team members to maintain a healthy school environment.
- Prepared participants to implement the tools and strategies provided to create a healthier environment for students and staff.
- Demonstrated how to take action and commit to addressing the well-being of school occupants in current and future facility plans.

Presented by the U.S. Environmental Protection Agency Indoor Environments Division

April
